

The house is functionally built to be eco-friendly, and shaped to give a calm and stable feeling.

Whereas majority of architecture is based on lines, this house, to emphasize it's feeling of 'home sweet home,' is built out of gradual curves.

The shape also fits well with its function. Anyone can see this structure and say it's a private home, not an office building, nor a market.

Overall outline of the building is in harmony with the landscape. Sharp brick building clearly shows there's civilized human beings living in it. However, it's hard to figure out if it's necessarily people living in it or is it untamed raccoon or squirrel living in it, except for the size and it's delicacy of it's shape.

The inside platforms (or floors) of the rooms (or buildings) are shifted a few inches, so that when you enter the room you have to go down a little step. The lower levels gesture that it is 'the indoor' and gives a comfortable feeling.

Accounting in the pittsburgh general weather, the house collects rain and captures as much sunlight as it possibly can. It uses non-electronic, show time, and send vapor through the room.

The house suits well in to the nature's environment and eco-friendly. It also has the qualities of a sweet & welcoming individual home.
